

Programming Handset

2.10

The Intelligent Solution's Rapid programming handset is used to configure all elements of the devices in the lighting control system. The device provides a simple to use text base menu and keypad driven programmer.

Configuration of the lighting control system is as simple as selecting a device, setting the ID for the device and programming the required parameters. For output controllers, dependencies can be added using the handset.

As well as configuration, the handset provides user menus and allows ID's and timing information to be read back from the device.

The unit is battery powered with an auto-off function to preserve battery life, and auto-menu return on all the sub-menus.

The handset is also used to program the new Scene Set control plate, for its ID, light levels and fade rates.

Range: **5 Metres**
Batteries: **4 x AA**

Type: **Class 2**
Colour: **Cream**

Temperature: **-10°C +35°C**
Humidity: **90% RH**

Material: **ABS**
