

# Scene Set - Series 2 Control Plate

2.8.1

The Intelligent Solution's Scene Set Control Plate is used in conjunction with all the plug in and hardwired control modules. It allows lighting to be controlled at different levels in different groups. The Scene Set Plate fits a standard single gang plate profile and fits flush or surface 25mm back boxes. The control plate uses a Wandsworth Group Series 2 range. The standard plate finish is Brushed Stainless Steel but any plate finish in the series 2 range can be supplied.

From the plate you can call scenes 1 – 4, raise, lower and Off. The Off button can also be programmed for a scene value. Press and hold buttons 1 – 4 and you call scenes 5 – 8. All scenes can be programmed by hand held programmer, PC tools or by button control on the plate eliminating any need for specialist tools or engineers. Control plates have blue LED back lighting for locating and scene notification. Connection to system is by CAT5 data cable to any other device on the system, RJ45 on the network end and a push on male plug at the scene set plate. Contacts for Room Join are available both on the rear of the scene set plate and at the control modules.

Material: **Mild Steel Front Plate.**

Voltage: **9-18V DC**  
Temp: **-10°C to +35°C**

Humidity: **90% RH**
