

User Hand Set

2.9

The Intelligent Solution's Rapid handset provides user override for the detectors. It is ideal for the user, at their desks to adjust the lighting to comfortable levels. The device can be used to override the lights to off or to dimmed levels or call scenes for meeting rooms and conference facilities.

The following functions are available...

Lux up and down: On dimming systems the target light output will be adjusted. On non-dimming systems, the threshold at which the lights turn on will be adjusted.

Override on: Causes the detector to permanently detect occupancy. Useful for cleaning and maintenance.

Override off: Causes the detector to be held off when the area is occupied. Useful for slide shows etc.

Scene Down: When used with the scene set plate steps the lights down through the programmed scenes.

Scene Up: When used with the scene set plate steps the lights up through the programmed scenes.

Under any of the handset operations and once the passive infra-red detector has timed out, the sensor reverts to normal operation.

Wall mounting brackets are available for attachment to wall or desk for the tidy storage of user hand sets. Available in three finishes, **Clear**, **Frosted** and **Gloss Black**.

Range: **3 Metres**
Batteries: **2 x AA**

Type: **Class 2**
Colour: **Black**

Temperature: **-10°C +35°C**
Humidity: **90% RH**

Material: **ABS**
